NISM and CAMS Collaborate to Strengthen Experiential Compliance Learning through the NISM Compliance & RegTech Lab

Mumbai, October 14, 2026: The National Institute of Securities Markets (NISM) and Computer Age Management Services Limited (CAMS) have entered into a collaboration to integrate CAMS Lens into the NISM Compliance & RegTech Lab. The initiative aims to enhance practical learning and provide students, faculty members and securities-market professionals with exposure to technology-enabled regulatory research and compliance processes.

The collaboration is aligned with NISM's commitment to bridging the gap between academic learning and industry practices through technology-driven education, training and capacity building. The NISM Compliance & RegTech Lab provides an experiential learning environment where participants can develop a practical understanding of regulatory technology, compliance processes, risk management, analytics, artificial intelligence and market-surveillance solutions.

The Lab enables participants to engage with simulated regulatory scenarios using synthetic identities, transactions and case files. Through practical exercises, learners gain exposure to compliance workflows such as screening, risk assessment, transaction monitoring, investigation, evidence evaluation and reporting. The initiative is designed to strengthen participants' understanding of how technology can support regulatory interpretation, compliance management and decision-making in the securities-market ecosystem.

As part of the collaboration, the Regulatory Content and Intelligence module of CAMS Lens will be made available to students and faculty members through the NISM Compliance & RegTech Lab. This will enable participants to explore regulatory information and understand compliance requirements across the capital-markets ecosystem, with a primary focus on SEBI-regulated intermediaries. Faculty members will also be able to leverage the platform to support academic delivery, training programmes and practical learning activities.

CAMS Lens is an AI-powered regulatory intelligence and compliance execution platform designed for participants across India's capital-markets ecosystem. Its integration into the Lab will complement NISM's existing learning infrastructure and provide participants with practical exposure to technology-enabled regulatory research and compliance workflows.

Commenting on the collaboration, **Shri Sashi Krishnan, Director, NISM, said**, "The growing complexity of financial markets requires compliance professionals to combine sound regulatory knowledge with the ability to work effectively with technology. The NISM Compliance & RegTech Lab has been created to provide this practical exposure. With four decades of experience serving the mutual fund ecosystem, CAMS bring a deep understanding of the regulatory environment and the complexities involved in navigating it. The integration of its in-house platform, CAMS Lens, will strengthen the Regulatory Intelligence module of the NISM Compliance & RegTech Lab and enable participants to engage with regulatory information in a structured, technology-enabled environment."

Mr. Anuj Kumar, Managing Director, CAMS, said, "Effective compliance begins with the ability to access, understand and apply regulatory information with clarity. Through CAMS Lens, we seek to make regulatory intelligence more accessible and actionable for participants across the capital-markets ecosystem. Our collaboration with NISM allows us to extend this capability to the learning environment and contribute to the development of technology-enabled compliance professionals."

The collaboration agreement was formally signed in Mumbai on October 14, 2026, by Shri Sashi Krishnan, Director, NISM, and Mr. Anuj Kumar, Managing Director and CEO, CAMS.

About CAMS Limited:

CAMS is a financial infrastructure and service partner to the asset management industry, providing platform-based services to the BFSI segment. The company is India's leading registrar and transfer agent for mutual funds, serving an aggregate market share of ~68% based on mutual fund average assets under management ("AAuM"). CAMS is also the market-leading platform and service partner for alternative investment funds and portfolio managers, offering end-to-end digital and fund administration services. Its subsidiary CAMSKRA is a fast-growing KYC repository for capital markets, leveraging new-age technologies to deliver seamless investor onboarding. CAMSPay specializes in secure, seamless and innovative payment solutions for mutual funds, BFSI and EdTech sectors. Through CAMSRep, the company provides services to insurance companies and the insurance ecosystem. CAMS has also expanded into new growth areas such as Account Aggregator and Central Record-Keeping Agency (CRA) services for the National Pension System. The company has further strengthened its digital capabilities through its majority stake in Think360.ai, a full-stack Data Science and AI-focused firm, and Fintuple Technologies, a digital transformation partner for capital market entities.
